

Consulting and Audit Services:

As the global leader in Reproductive Medicine, IVIRMA Global stands out for delivering unparalleled results, boasting the most innovative R&D platform, and maintaining a highly skilled team. By choosing Global Education, you tap into over 30 years of experience and the expertise of our exceptionally qualified professionals.

Our dedication to research and innovation is what sets us apart, ensuring that you receive training from highly qualified and up-to-date experts on the latest advances in the field.

Training & Consulting: Consulting and Audit Services

Consulting and Audit Services provide expert advice and recommendations to address issues and enhance efficiency, quality, and safety in the laboratory. This service is recommended when clinical outcomes fall below expectations with an unknown cause or before launching a new assisted reproduction unit (start-up consulting).

The consultant/auditor is an IVIRMA embryologist specializing in the company's quality control, conducting a laboratory diagnosis to develop solutions and improvement strategies. Subsequent monitoring and training are provided if necessary.

Consultations can be conducted in person, online, or through a combination, based on the clinic's needs.

Key considerations in a consultancy include:

- > Optimization of processes and SOPs
- > QA
- > Laboratory Safety
- > Data and records management
- > Staff training
- > Normative compliance
- > Innovation and technology
- > Cost and efficiency evaluation

The audit modality encompasses a comprehensive review and evaluation of the practices and procedures conducted in a laboratory or clinic. This ensures that the provision of health services, specifically in assisted reproduction, meets the highest standards of quality, ethics, and safety.

In this case, various aspects of the laboratory or clinic's operation are evaluated, including:

- > Normative compliance
- > QA
- > Patient safety
- > Data registration and documentation
- > Ethics and informed consent
- > Staff training and development
- > Technology and equipment
- > Processes and SOPs

An audit aims to identify areas for improvement and ensure that the laboratory or clinic is adhering to best practices. Additionally, it plays a crucial role in maintaining patient confidence and ensuring the quality and safety of services offered in this highly specialized medical setting.
